DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see page 4, filed October 12, 2004, with respect to claim 1-5 have been fully considered and are persuasive. The rejection of claim 1-5 has been withdrawn.

Allowable Subject Matter

2. Claim 1-5 are allowed.
3. The following is an examiner's statement of reasons for allowance:

The present invention is directed to a method for backhauling data from a base station to a network controller. In the present invention, the base station determines the quality of the information received from a mobile. If the base station determines not to convey the information, it modifies a portion of the header to identify the frame without any data and transmit the header without any data.

There are several prior arts teaching similar method of backhauling data from a base station to a network controller.

The closest prior art Dempo (US Patent 6,587,465) teaches the base station determines the quality of the information received from a mobile 1100. If the base station determines not to convey the information, it modifies a portion of the

header (Column 9 Line 14-23) and transmit an invalid or dummy packet (Column 12 Line 37-46). Dempo, however, fails to teach the dummy packet has only header without the data package. This feature is claimed in the independent claim 1, and render it allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
